

Project Executable Files

Date	30 September 2026
Team ID	[ENTER TEAM ID]
Project Name	ComicCraft - AI Comic Story Creator using Gemini Models
Maximum Marks	3 Marks

All files needed to run the project are in the repository. The evaluator can follow the run instructions below.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes - app/, templates/, static/, tests/, scripts/
2	README / Setup Guide	Yes - README.md
3	requirements.txt / package.json / dependency file	Yes - requirements.txt
4	Database schema / seed files	NA - no database (file storage)
5	Environment configuration file (.env.example or similar)	Yes - .env.example
6	Deployed application URL	NA - local deployment (http://127.0.0.1:8000)
7	APK / Executable binary	NA - web application
8	Dockerfile / Containerization config	Yes - Dockerfile
9	Test files and test results	Yes - tests/ (21 tests) and 6.Project Testing/Performance Testing.pdf
10	Demo video or walkthrough	Pending - add link after recording (see Step 3)

Step 2: File / Folder Structure

```
ComicCraft/  
|-- app/  
|   |-- main.py routes.py config.py schemas.py  
|   |-- services/  
|       |-- gemini_flash.py gemini_pro.py gemini_client.py  
|       |-- image_generator.py layout_builder.py exporters.py  
|       |-- pipeline.py mock_ai.py errors.py  
|-- templates/ index.html comic_preview.html export_success.html  
|-- static/    img/background.svg panels/ exports/  
|-- tests/     test_services.py test_routes.py conftest.py  
|-- scripts/   load_test.py  
|-- 1. Brainstorming & Ideation/ ... 8.Project Demonstration/ (phase PDFs)  
|-- requirements.txt .env.example .gitignore Dockerfile README.md
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not hosted - runs locally at http://127.0.0.1:8000 (API docs at /docs)
Login Credentials (Demo)	Not required - the application has no login
Platform / Hosting Provider	Local Uvicorn server (Docker image available for future hosting)
Repository Link	[Paste your GitHub repository link here after upload]
Demo Video Link	[Paste demo video link here after recording]

Step 4: Run Instructions

```
python -m venv env
env\Scripts\activate # Windows (macOS/Linux: source env/bin/activate)
pip install -r requirements.txt
copy .env.example .env # macOS/Linux: cp .env.example .env ; then add GEMINI_API_KEY and HF_API_KEY
uvicorn app.main:app --reload
# open http://127.0.0.1:8000 (no keys or GPU? set COMICCRAFT MOCK=1 before starting)
pytest -q # run the automated tests
```

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Stable Diffusion is slow on CPU (minutes per image).	Use a GPU (Colab/Kaggle T4) or lower IMAGE_STEPS / IMAGE_SIZE in .env. Placeholder panels are used if the model cannot load.
2	The model names in the project brief (Gemini 1.5) are retired.	Model IDs are configurable in .env; defaults use current -latest aliases.
3	Comic generation runs inside the request, so the page waits until finished.	A loading message is shown; a background job queue is future scope.
